

The Events Calendar is a tool that allows you to publish localized events, shown on the map by an icon that identifies the event type.
An event is characterized by the following information:

- title
- topic and its icon to view it on the map
- description
- image
- location
- begin date
- end date
- organizers
- participants
- website
- attachments

Display is "by month" but you can also directly access a single day via a classic panel that displays all the days of the month.

It is possible to comment the published events via text messages with attachments.
All events entered, including any comments, are subject to moderation.

It is possibile to receive a notification of the insertion of new events and comments on a single event.
The Events Calendar is also equipped with RSS feeds and export in KML format for viewing on external maps.
